INTRODUCTION.

Victoria is situated at the south-eastern extremity of the Australian continent of which it occupies about a thirty-fourth part, and contains about 87,884 square miles. It lies approximately between the 34th and 39th parallels of south latitude and the 141st and 150th meridians of east longitude. Its greatest length from east to west is about 493 miles, its greatest breadth about 290 miles and its extent of coast-line (including the length around Port Phillip Bay, Western Port, and Corner Inlet) 980 miles. It is bounded on the north and north-east by New South Wales from which it is separated by the River Murray and by a straight line in a south-easterly direction from a place near the head-waters of that stream, called The Springs, to Cape Howe. On the west it is bounded by South Australia and on the south and south-east its shores are washed by the Southern Ocean, Bass Strait, and the Pacific Ocean.

The climate of Victoria is characterized by warm summers, rather cold winters, and rain in all months. Mean temperatures in midsummer (January) range from 65 deg. (Fahr.) in the south to 75 deg. (Fahr.) in the north-west, corresponding means of daily maxima being 80 deg. (Fahr.) in the south and 90 deg. (Fahr.) in the north-west. In midwinter (July) the mean temperature is generally below 50 deg. (Fahr.), mean of the night minima being below 40 deg. (Fahr.).

ACKNOWLEDGMENT.

Much of the information in this "Abstract" is obtained from the Commonwealth Statistician and other authorities. Acknowledgment with thanks is made to all those responsible for the furnishing of such particulars.

(g) Includes 15,218 "Labourers, Industry Undefined," classified to the Building and Construction Industry at 1933 Census.

VICTORIA—UNEMPLOYMENT IN TRADE UNIONS.

The quarterly figures show the number of persons who were reported out of work for three days or more during a specified week in each quarter; they include sickness but not persons out of work through strikes or lockouts, except those outside the industry concerned who are indirectly affected. The annual figures represent the average of the four quarters.

(a) Peak of unemployment.

Note.—The unions covered by the returns, which are furnished to the Commonwealth Statistician, represent about 60 per cent. of the total membership of unions, and relate to between 20 and 25 per cent. of all wage and salary earners. The value of the percentages of unemployment derived from Trade Union returns is in the indication they give of the trend of unemployment among trade unionists as reported by secretaries of Trade Unions.

Note.—The above index has been computed by the Commonwealth Statistician.

MELBOURNE WHOLESALE PRICE INDEX-NUMBERS.

The index of wholesale prices was first computed by the Commonwealth Statistician in 1912 and relates chiefly to basic materials and foods weighted in accordance with consumption in the years immediately preceding that date. Neither the component items nor the weighting have been varied. Consequently the index is a measure of changes in wholesale price levels based on usages which have altered substantially since the period on which the weighting was determined. As such it is useful as an indication of long-term trends over the past 87 years which it covers, on the assumption that the relative importance of component items remained constant. But it no longer serves as a measure of price variations from month to month or from year to year of commodities weighted in accordance with present-day consumption. Reference to a description of the index published in the annual *Labour Report*, issued by the Commonwealth Statistician, will indicate that animal fodders preponderate in the "Agricultural Produce" group, while "Building Materials" include little besides imported timber. In other groups, some principal items have increased in consumption while others have decreased. A new wholesale price index, covering basic materials and foodstuffs, has therefore been computed, in which the items have been regrouped and reweighted as indicated, and comparative index-numbers back to 1928-29 are published in the next statement.

WHOLESALE PRICE INDEX-NUMBERS—BASIC MATERIALS AND FOODSTUFFS.

Following a conference of Statisticians in 1930 an index by the Commonwealth Statistician has been computed from new data on prices and consumption. Both in contents and method of computation it differs from the Melbourne Index of Wholesale Prices published in the foregoing statement. The price quotations have in the main been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from home-produced building materials, coal and one or two minor commodities, however, the price movements may be taken as representative of fluctuations in wholesale prices of basic materials in most Australian markets. The weighting system adopted is based on average annual consumption during the years 1928-29 to 1934-35 inclusive.

VALUES OF PRINCIPAL ARTICLES IMPORTED FROM OVERSEA COUNTRIES INTO VICTORIAN PORTS (SUBJECT TO REVISION).

(As a result of an amendment to the *Customs Act* 1901-1936, the basis of valuation of imports for duty was varied on the 15th November, 1947. Prior to that date imports were valued in British Currency and represented the F.O.B. value at Port of Shipment plus the statutory ten per centum imposed for value for duty purposes. From 15th November, 1947, the statutory ten per centum was eliminated and all imports were valued in Australian Currency, the value for duty of imports therefore represents the F.O.B. Value at Port of Shipment. All import values shown in the following tables are expressed on the revised basis of valuation in Australian Currency F.O.B. at Port of Shipment.)
